Subject: Settlement Support

Thank god that the DOJ has realized that we just need them to innovate instead of drain all the company resource on litigation, I would really support the settlement deal and would like to voice out to other state (Just put politics away let us give those guys a break to do something good in this life for our children and not follow the foot steps for money campaign, but think about the tax payer and the future of the economics otherwise will have a company like Enron that is like balloon of air that is supported by bunch of politicians. please let the market drive our economic and the freedom to innovate and bundle an add on software is always a plus to regular users).

Our freedom to choose that drive me to write this and to choose Microsoft as a my favorite software provider company. please keep our choices alive.
